

Frontend Developer with two years of experience in software development at a startup. As a self-taught frontend developer, I was invited by the startup founder to join the team of programmers. While taking on my responsibilities, I expanded my frontend skills by working with frameworks such as **Next.js**, **Gatsby**, and gained a solid foundation in backend development. My rich experience in a rapidly changing environment allowed me to become an independent and confident programmer in a very short amount of time. My goal is to further expand my knowledge of modern web technologies by working on diverse projects.

Work History

2021-05 **Full Stack Developer (MERN)**

- present
Company, remote

Responsibilities:

- Building and maintaining dashboards on the frontend using: React (CRA), Next.js, Gatsby, Redux, GraphQL
- Maintaining and developing the company's Next.js and Gatsby websites
- Designing and implementing forms using: react-hook-form
- Creating simple recommendation systems on the backend and frontend: MongoDB, mocha, Next.js
- Supporting the business by proposing business ideas and technical solutions.

Achievements:

- Over a period of one year, with a team of six, created a system supporting job search, visited by over 75,000 candidates and a job board containing over 8,000 positions
- Received recognition for participation in the ESOP (Employer Stock Ownership Plan) program due to a proactive attitude and commitment.
- Designed and implemented a feature that streamlined user profile completion.
- Participated in designing, implementing, deploying, and maintaining 70% of the application's presentation layer.

Technologies Used:

React, Next.js, Gatsby, Redux, styled-components, Tailwind, GraphQL, Node.js, Express, Apollo Server, MongoDB, Mocha.
